

How to help

Check your home is connected right.

Are the drains in your home connected to the right sewer? If not fix them.

Only rain down the drain!

Use your local household waste site to dispose of chemicals, paints, cooking and motor oils.

Bin it, don't block it!

Dispose of cooking fats, oils and grease in the bin to avoid pollution from blocked drains and overflowing sewers.

Bag it and bin it!

Dispose of household items such as nappies, cotton buds, wet wipes, razors, tampons and syringes in the bin, as these block drains and cause overflowing sewers.

Report it, don't ignore it!

Report water pollution to the Environment Agency's incident hotline on **0800 80 70 60**.

Connect with your local environment and do the *right* thing.

Help keep your local rivers and beaches clean and healthy.

Stop pollution

We're working hard to reduce water pollution in your local rivers and beaches to make them cleaner and safer for people and wildlife. But we need your help. To prevent pollution, we need you to check the plumbing in your home.

How could my home be causing pollution?

The dirty water in your home could be draining straight into your local river or beach. This can happen when a new appliance is plumbed in, when a property is being extended or renovated, or even when it was originally built.

How does this happen?

For most houses built after 1920, the waste water drains into a separate sewer system allowing clean rainwater to drain to the *surface water* sewer and into a local river or beach. If any dirty water pipes from appliances, sinks, baths, showers or toilets are connected to the surface water system, this pollutes your local river or beach. Similarly, if gutters and gulleys are wrongly connected, they will be sending clean rainwater into the *foul water* sewer, overwhelming it and causing flooding.

Who is responsible?

As the property owner you are responsible for fixing any misconnections, even if these were in place prior to you owning the property. It is often simple and cheap to fix. **If you do not fix a misconnection, you're directly affecting your local environment and could face a fine of up to £50,000.**

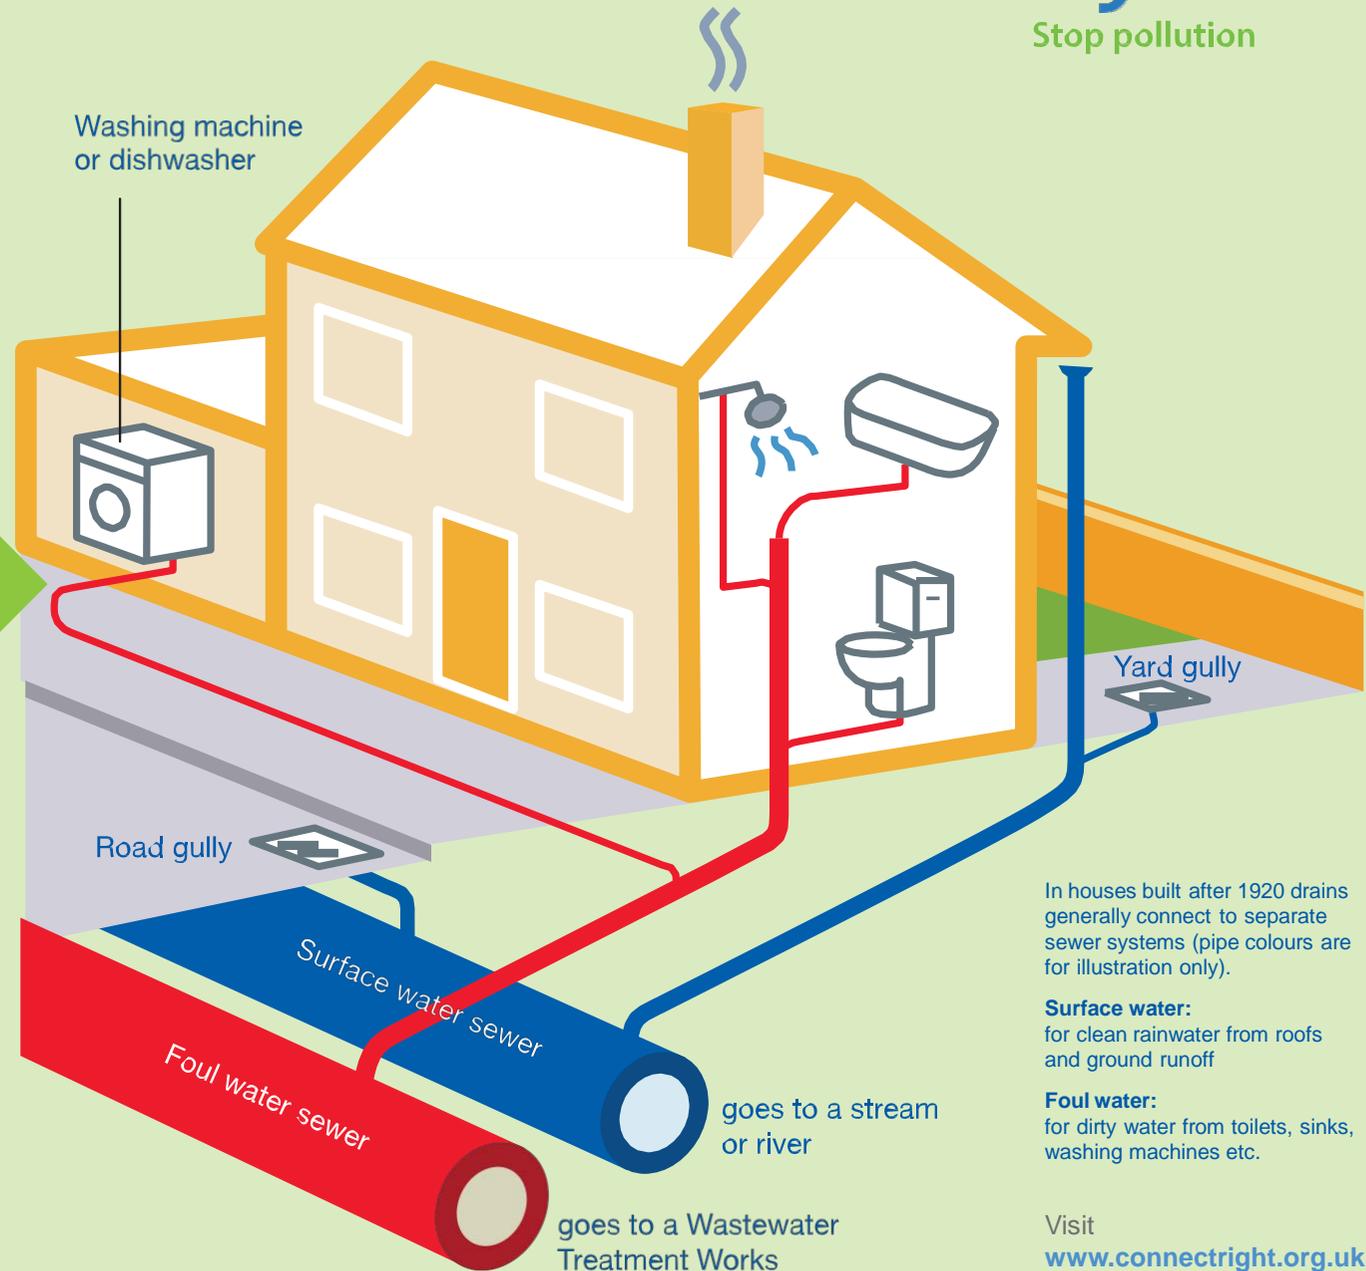

What can I do?

Check you have the right connections in your home for all *surface water* and *foul water* plumbing. If you are unsure what to do, please visit www.connectright.org.uk for more information and to find contact details for your water company or a trusted plumber near you.

Connect with your local environment and do the *right* thing.
Check your plumbing today.

Correct Drainage Connections Illustrated

Stop pollution

In houses built after 1920 drains generally connect to separate sewer systems (pipe colours are for illustration only).

Surface water:
for clean rainwater from roofs and ground runoff

Foul water:
for dirty water from toilets, sinks, washing machines etc.
